Managing Editor

Australasian Medical Journal

E-mail: medicalsoci@medicineinsights.com

Dear Readers,

I am pleased to present to you this latest issue of the year 2021. Australasian medical Journal was established in the year 2008 and ever since its inception; the Journal has been consistently publishing scholarly and systematic study findings at issue release frequency of twelve issues per year. All the published issues comprised a balanced article types that include the original research, reviews, case reports, case studies, letter to the editors, commentaries and opinions.

The AMJ was founded to help researchers from developing countries to communicate the outcomes of their systematic explorations. We remain committed to that objective. As well, we continue to receive more papers from leading researchers in Australia, Saudi Arabia, China, the United States and other countries, which is a testament to our commitment to quality.

The Journal has mainly concentrated on bringing forth the innovations in medical science and health care with coverage primarily sourced from Australasian region. All the published content is indexed widely across different abstracting and indexing databases worldwide. The journal is currently engaged in compiling the seventh issue of the current volume 14. This year the journal has succeeded in publishing quality peer-reviewed articles on wide range of topics that included thyroid cancer treatment, management of atopic dermatitis, cardiovascular morbidity in developing countries, and impact of COVID-19 pandemic, medical education, severity and symptomatology of corona virus infection. These topics reflect the emerging challenges and contemporary research that is taking place all across the world in medical science. AMJ has maintained the publication timeliness due to professional services offered by the academic editorial and journal management boards.

We had very stringent regulations this year that led to very few articles being published in as a consequence of high rejection rate. The submissions were also very less than compared to the previous year. Perhaps this could be the aftermath of the global pandemic situation. The editorial board of the journal is comprised of eminent academicians and research experts from all across the world and particularly the Australian representation is very strong. I take this opportunity to congratulate all our authors for publishing their valuable contributions through the medium of this journal. I extend my sincere appreciation to all our editorial and expert peer-reviewers for enabling timely publication of the articles keeping the demands of the current audience of the journal in view. I convey my best wishes to the journal management for the successful production and release of the forthcoming regular and special issues of the Journal.

We look forward to continued success and growth. Please consider signing up to be a reviewer or recommending reviewers to our journal. Also make sure to submit manuscripts to the AMJ for prospective publication and kindly recommend the journal to your colleagues as a venue for publishing their academic research. If you have any questions please feel free to contact the email AMJ Editor.
